

Senior Living-Specific Casegoods from Direct Supply

MATERIALS

Veneer

- Perfect for hospitality-inspired and transitional care environments, upscale veneer construction is warm and inviting and often features high-pressure laminate tops that resist moisture and spills
- Constructed of renewable, eco-friendly material with a thin wooden sheet applied to the furniture's surface
- Easily touched up in the field, and can be stained darker or refinished with high gloss or matte
- Less-visible seams provide a higher-end look that looks great longer

Thermolaminate

- Seamless surfaces resist cracking, chipping and peeling for a fresh look that will last in demanding settings like Memory Care
- More flexible than traditional laminate, making it a more durable solution
- Heat-sealed to furniture in one continuous piece so moisture and bacteria are kept out

Laminate

- This budget-friendly option is available in a spectrum of styles so you don't have to sacrifice the look you want for the price point you need, and includes high-pressure laminate tops that resist moisture and spills
- Construction features an overlay of paper over plastic (usually with a woodgrain pattern) that is attached to an engineered wood substrate and sealed

Dovetail joint

Dowel-and-glue joint

Mitre joint

Fixed drawer bail

Loose drawer pull

DRAWER JOINTS

- Dovetail joints are the strongest joints because the wood grooves act as a lock to hold the construction together longer. It is more labor intensive to construct them, making them a more expensive option
- Dowel-and-glue joints join on a flat edge and are reinforced with glue and wood dowels
- Mitre joints are two beveled pieces of wood that meet at a corner and are glued. They are often reinforced by staples or screws

DRAWER HARDWARE

- Fixed drawer bails are one-piece fixtures that are rigid and easily grasped by most residents
- Loose drawer pulls are usually hinged or hanging from a mounting plate. Because they must be lifted to use, they can be difficult for residents with reduced dexterity
