

SAFE RESIDENT TRANSFER & MOBILITY PRODUCT GUIDE

Cultivating a culture of safety for improved outcomes

Between **26% - 39%**  of residents in residential care facilities need help with **TRANSFERS**, and between **25% - 40%** need assistance with **MOBILITY**.

7x **HEALTHCARE WORKERS** experience more **MUSCULOSKELETAL INJURIES** than any other worker.

 **\$20 BILLION** the estimated **ANNUAL COST** of **BACK INJURIES** to healthcare workers in the US.

 **20%** of **NURSES** who leave their role do so **DUE TO RISK OF INJURY**

A CHANGING LANDSCAPE

Research and resources on safe resident transfer and mobility programs have historically been focused on the hospital and Skilled Nursing market. Assisted Living is neither of these – it includes unique, diverse communities that offer a wide variety of social, cultural, emotional and physical support to older adults.

Many providers operate a social model that emphasizes the wellness benefits of living in a community as a person ages. However, more and more Assisted Living communities provide care and, in some cases, are changing their models to prioritize care with a social focus.

Assisted Living providers must take note that acuity is on the rise. Today, the average resident in Assisted Living is 85 years or older, likely female and needs help with at least three ADLs, including transfer and mobility assistance (Centers for Disease Control, 2015).

In part due to changes in regulations and reimbursement, plus an evolving consumer desire to move into and stay in Assisted Living, many residents and their families prefer to remain in these communities as they age in place. **As age and support needs change and acuity rises, the need to lift and move residents increases, as does the risk for resulting employee and resident injuries.**

In addition to the added risks with increased aging and comorbidities, increased obesity in the United States adds risk to resident transfers and movement. According to the CDC, more than one third of adults 65 and older are obese.

Nationwide, providers report difficulty attracting and retaining care-providing staff. **As workforce shortages increase, programs that effectively prevent injuries are critical to retaining nurses, nursing assistants and other care providers.**

From increased staff retention to fewer injuries, implementing a safe resident transfer and mobility program is a great way to become more operationally efficient and marketable in your local area.

Transfer and mobility products developed specifically for Senior Living

Product recommendations and consultations with Senior Living experts

Research shows safe resident transfer and mobility programs may have a positive impact on residents, caregivers and providers.

Source: Centers for Disease Control and Prevention

Residents may benefit from:

- Reduced risk of injury
- Reduced hospitalizations due to falls
- Ability to age in place

Source: Centers for Disease Control and Prevention

Providers may see:

- Lower staff turnover
- Higher occupancy rates
- Lower workers' compensation costs

Source: Occupational Safety and Health Administration, Argentinum

RISE TO THE CHALLENGE:

Attract & Retain Residents of Assisted Living

Trust Direct Supply to help you manage safer resident transfers and mobility in Assisted Living.

CONSULTATION

Expert advice based on your unique community and goals.

PRODUCTS

Unbiased selection assistance to find the perfect solutions.

EDUCATION

Aggregated best practices to ensure success.

MEET THE RESIDENTS

Meet the residents of Silver Lights Assisted Living! Read about our example residents below, and look for them throughout this catalog for ideas and insights into which products may work for your residents.

BARBARA

Barbara is independent, but she could benefit from products to extend her independence and keep her safe.

AGE: 75

LEVEL OF ASSISTANCE:

- Getting out of bed and chair
- Reminder to use walker in apartment

PRODUCTS USED:

- Walker or cane
- Standing aids
- Grab bars in bathroom
- Raised toilet seat

JOE

Joe transferred to Silver Lights from a Skilled Nursing community, where he was recovering from a stroke.

AGE: 78

LEVEL OF ASSISTANCE:

- Minimum to moderate
- Moving in bed and getting into chairs
- Self-ambulatory in wheelchair

PRODUCTS USED:

- Gait belt
- People mover or sit-to-stand lift
- Transfer board for the shower

EVALUATE YOUR COMMUNITY:

Do your residents need help with common transfers like these?

- On/off toilet
- On/off a shower chair or bench
- Standing up from a static chair
- Sitting on a bed and lying down
- Positioning in a bed

GEORGE

George is one of the youngest residents, but due to his stroke, weight, worsening diabetes and failing eyesight, he can't live on his own.

AGE: 64

LEVEL OF ASSISTANCE:

- Moderate to extensive assistance with standing
- Self-ambulatory with a walker or wheelchair
- Products must feature correct weight capacity

PRODUCTS USED:

- Sit-to-stand lift
- Multifunction bed
- Positioning bars or trapeze on bed
- Walker

WANDA

Wanda moved in after she began to wander away from home. She is progressing through the phases of dementia and needs to manage her cancer as well.

AGE: 80

LEVEL OF ASSISTANCE:

- Minimal to moderate, but will need more over time
- Getting out of bed, going to the bathroom and getting into a chair

PRODUCTS USED:

- Slide sheet
- Bedside chairs, a couch with arms or standing aids
- Shower chair

- Sitting up in bed and to the side of the bed
- Standing up from the bed and walking independently or with a cane or walker
- Standing up and sitting down from a static couch or chair

- Standing up from the bed and transferring to a chair or wheelchair
- Standing up and sitting down in a wheelchair if unable to raise or lower self
- Getting up from the floor

SAFE ENVIRONMENT

Don't underestimate the importance of creating and maintaining a safer environment in Assisted Living! Conducting a thorough and accurate initial assessment can help you make decisions regarding fall risk reduction and overall safety for staff and residents.

Consider modifications that support safer mobility and transfers in resident rooms, bathrooms, living and community spaces, wellness centers and outdoor spaces.

..... Unique environmental design can help you reduce fall risk.

Examples include:

- Spaces that encourage engagement and active lifestyle to help maintain balance and strength (e.g., fitness centers, walking spaces, counters to stand at)
- Improving sleep by minimizing noise and adjusting lighting for day and night
- Lighting strategies to adapt for low vision
- Floor finishes and transitions between rooms
- Indoor and outdoor walking spaces with easily identified places to stop and rest
- Installation of grab bars in bathroom
- Multifunction beds
- Furniture to support easier sitting and rising

91.5%

CUSTOMER FAVORITE!

Direct care workers make up 20.8% of the total healthcare workforce; 91.5% are female and 54.7% are ages 35 - 64.

These numbers will remain flat through 2024, creating concerns for how the gap in healthcare worker needs will be filled.

Source: U.S. Government Accountability Office, 2016

.....
 Each year a typical Assisted Living community with 100 beds will report **100 - 200** falls.

Of these falls, about **10 - 20%** cause serious injuries and **2 - 6%** cause fractures. The average resident has **2.6** falls per year.

Source: Centers for Disease Control

WANDA

When Wanda wakes up at night to use the bathroom, she sometimes becomes disoriented. Motion-activated underbed lighting can help guide her, while a bedside mat can help reduce the impact if she falls.

A. Panacea® 3500 Adjustable-Height Low Bed – versatile construction for increased resident comfort and a 600 lb. weight capacity

»Ships in 2 days or less!

Resident Comfort

- Auto Contour moves the head and knee sections simultaneously to help maintain proper resident position and minimize shearing
- Integrated width and length extension allows you to adjust an existing bed from 35"W to 39" or 42"W and from 80" to 84"L without the use of tools, so you can easily meet different resident needs
- Pendant features Comfort Chair button to help keep the resident's hips and shoulders aligned when in the seated position

Easy to Use

- Backlit hand pendant makes bed adjustments easier for residents and staff, even in low light
- Assists and end panel brackets can be installed without tools, and feature quick-release technology
- Optional two-pedal, color-coded locking system is located at the foot end on mobile-at-any-height bed configurations

- Includes 4-pocket organizer, reducing risk of entrapment and providing additional storage space

- #E0964 Bedrail Advantage

RESIDENT MOBILITY

As the average age of residents entering into Assisted Living rises, frailty also increases. In a 2015 study, researchers from Johns Hopkins Bloomberg School of Public Health found that residents living in Assisted Living communities were more than twice as likely to be frail than those in private homes. Frailty characterized by symptoms of weakness, exhaustion and limited mobility may create an increased risk for falls, chronic disease and disability.

In this same study of nearly 7,500 adults age 65 and older, 15% of residents were identified as being frail and an additional 45% were identified as pre-frail. Among the frail, 42% were hospitalized in the previous year compared to 22% of the pre-frail.

Given the growing number of adults 85 and older in Assisted Living, providers should consider the impact frailty may have on the resident's ability to continue living in an Assisted Living community. Providers should also consider their own ability to address frailty in their resident population so they may improve quality of life and delay the need for a move.

Consider leveraging products designed to help aid mobility, promote safety, increase balance and strength, and foster independence in Assisted Living environments.

SAFER RESIDENT TRANSFERS

As Assisted Living providers assume a larger role in the post-acute care continuum, insurance companies, ACOs, hospitals and home health agencies will become critical partners with expectations for customer satisfaction, resident outcomes – including injury avoidance and reductions in hospitalizations – and reductions in workers’ compensation claims.

Safe resident transfer and mobility programs may positively impact outcomes in direct and indirect ways. Based on industry trends in the post-acute care continuum, providers might consider measuring the following:

Resident Outcomes

- Customer satisfaction with safety programs
- Customer satisfaction with how their individual choices are recognized
- Rates of resident falls and injuries
- Hospitalization and rehospitalization rates
- Changes in resident functional status

Staff Outcomes

- Staff engagement with safety programs
- Accident and injury rates
- Missed days of work
- Workers’ compensation claims
- Retention and turnover

.....
More than 50% of employees state they do not have full knowledge of their community's safe resident transfers policy.

Safer resident transfers aren't just about new equipment – they're about your staff and residents. Just as equipment is routinely inspected to ensure proper operation, the core of the safe resident transfer program – the caregivers – should be periodically evaluated to ensure they are operating products correctly.

Panacea.

C.

Lifting or repositioning a resident in bed can place a caregiver's spine in a vulnerable position. The bed generally prevents caregivers from bending their knees to lift, causing them to lean forward – and placing their backs at risk for injury. Using a lifting device can help reduce the risk.

Source: Centers for Disease Control and Prevention

A. Sally Tube from Tollos Medical – reusable or single resident use

»Ships in 2 days or less!

- Multidirectional slide tubes are a two-sheet set that reduces friction during lateral transfer and repositioning
- Single resident use tubes and sheets can be used for four months on one resident, saving significant costs
- Proven smoothness after 150 washes for reusable sheets

#00729 Sally Tube, Reusable/Washable, 58" x 48"

#00732 Sally Tube, Single Use, 58" x 48" case of 50

B. NYOrtho Slide Sheet – alleviates caregiver strain and reduces injury

»Ships in 2 days or less!

- Use to reposition, slide and turn residents in bed, safely and efficiently
- Low-friction nylon sheet features tubular design and handles for easy repositioning
- Includes instructions for proper use and laundering

Our commitment to you for more than 30 years:

YOUR SATISFACTION IS GUARANTEED. PERIOD.

Michele Miller
Direct Supply Corporate Account Specialist

GEORGE

George doesn't enjoy using a lift, but because of his weight and reduced mobility, it's necessary to use one. To help minimize the amount of equipment needed, caregivers use a chair lift that includes a scale.

D. Rane RL8 Chair Lift – for optimal safety and comfort

- Low and narrow chassis easily maneuvers under beds and bathtubs
- Quiet, powerful belt drive with anti-entrapment feature
- Foot control on base for raise and lower functions
- Four 4" sealed twin casters with locking mechanism
- Audible alarm indicating low-battery, weight overload and highest settings reached
- Features foot-activated emergency stop, safety straps and soft, durable seating surface and backrest pad
- Seating and stretcher surfaces are not water absorbent and easy to clean
- Armrests help increase resident safety and are easily moved upward for transfers or access during bathing
- Commode seat for perineum cleaning and toileting; includes lid
- Ergonomically designed handles for easy maneuverability

USA

Did you know?

Adding inflatable cushions to your community can offer a more convenient and dignified solution that promotes safe lifting practices in the most compromising situations.

JOE

The community recently had a fire, prompting a complete evacuation. Because of a recent setback, Joe had very limited mobility, so caregivers used the S-CAPEPOD Evacuation Cocoon to get him safely out of the building.
